Professional Summary

Highly motivated Platform and DevOps Engineer specializing in **IaC** and **CI/CD**. Expert in architecting resilient distributed systems using **Go**, **Python**, and **Java** to eliminate bottlenecks. Notable achievements include implementing **Blue/Green** strategies to eliminate downtime, migrating delivery platforms to unified architectures, and deploying **Generative AI** to optimize workflows. Focused on delivering scalable, high-fidelity environments that significantly reduce cloud overhead.

Skills

- **Languages & Frameworks:** Go, Python (Flask), Java (Spring Boot), Apache Camel
- **Cloud & Infrastructure:** AWS, GCP, Azure, HCP, SAP BTP, Terraform, Nomad, Packer, Kubernetes, Docker, Helm, ArgoCD
- **CI/CD & Observability:** GitHub Actions, Jenkins, CircleCI, Datadog, Dynatrace, Elasticsearch, OpenTelemetry
- **Data & AI:** Kafka, SQS, Generative AI (RAG, LangChain, LLMs, [watsonx.ai](https://www.watsonx.ai), AWS Bedrock)

Professional Experience

Platform Engineer II | Hashicorp (an IBM Company)

February 2025 - Present

- Developed **AWS Bedrock**-driven diagnostics for provisioning failures in an infrastructure platform supporting 1.5M jobs/month, with async analysis, structured log enrichment, and operator-facing remediation guidance.
- Architected a unified multi-cloud **Go** platform to replace legacy **Python** providers, standardizing runner orchestration across **AWS** and **IBM Cloud** while achieving a 30-50% reduction in compute overhead.
- Designed an event-driven **Lambda** webhook handler for **GitHub Actions**, implementing HMAC validation, API Gateway routing, and a **PostgreSQL SKIP LOCKED** worker queue for asynchronous runner provisioning.
- Led the observability platform migration from **Datadog** to **Instana** across 20+ repositories to deliver critical-path migrations via **OpenTelemetry/OTLP** instrumentation (15+ custom metrics, **OTel Collector** pipelines in 6 runner **AMIs**).
- Accelerated developer productivity by ~25% by leading the development of a **Retrieval-Augmented Generation** chatbot using **Python**, **LangChain**, and IBM's **watsonx.ai** to answer technical questions based on internal GitHub documentation.

Release Engineer, SRE II | Penn Entertainment

April 2024 - January 2025

- Architected and implemented a **Blue/Green** deployment strategy in **Google Cloud**, eliminating planned release downtime and reducing release-related incidents by 60%, enabling zero-downtime production deployments.
- Led migration of applications to **ArgoCD**, reducing deployment times by 90% through automated syncing, and improved **CI/CD** reliability with fewer deployment failures using declarative configurations and automated rollbacks.
- Built internal release orchestration tooling using **Python**, **Flask**, **ArgoCD**, and **Kafka**, reducing release approval turnaround time by 70% and eliminating manual coordination bottlenecks across teams.

DevOps Engineer | SAP

July 2022 - April 2024

- Led the migration of applications from **SAP BTP Neo** to **Cloud Foundry**, resulting in a 75% reduction in operational costs.
- Independently implemented a **Blue/Green** deployment strategy, resulting in 100% application availability.
- Architected, developed, and maintained scalable microservices using **Java** and **Spring Boot**, streamlining deployments across 6 environments and reducing overall deployment time by 30%.
- Built and optimized **Jenkins CI/CD** pipelines, integrating Newman-based API testing to automate 80% of regression tests, reducing production defects by 30% and cutting deployment time from 45 minutes to under 15 minutes.
- Enhanced application monitoring and alerting using **Kibana** and **Dynatrace**, resulting in an improvement into the visibility of key performance metrics and reducing Mean Time To Recovery by 40%.

- Re-architected monolithic services into **Spring Boot** microservices, reducing deployment cycle times by 35% and maintaining a consistent 85% code coverage via **JaCoCo**.
- Demonstrated expertise in developing, configuring, and exposing **REST APIs** in **Microsoft Azure**, optimizing API performance to ensure 99.9% uptime for critical public-facing services..
- Leveraged **Apache Camel** routes to facilitate the smooth flow of messages, and **Kafka** for building scalable and distributed event-driven architectures, providing real-time data streaming capabilities.

Education

Honors Bachelors of Computer Science | Carleton University

June 2021

- Graduated with a 9.67 CGPA from the Management and Business Systems Stream with a Minor in Business.

Certifications

Discovering DevOps with SAP BTP | SAP

Issued in November 2023

Blockchain A-Z™: Learn How To Build Your First Blockchain | Udemy

Issued in February 2022

Professional Development

Business Women's Network Committee | SAP

January 2023 - May 2024

- A member on the SAP's Business Women's Network (BWN) Committee representing members in Montreal.
- Worked with other committee members to organize events to promote skill development and professional growth for women at SAP, fostering career advancement opportunities.

Personal Projects

Interval Timer Mobile App | Flutter, Dart

- Designed and developed a customizable interval training timer for iOS and Android devices using **Flutter** and **Dart**.
- Launched the app on iOS and Android, scaling to **500+** active users and generating **\$500** in monthly revenue.
